DETAILED ACTION

Allowable Subject Matter

Claims 1-9 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose or teach a rocking seat where the amplitude damping factor is measured with that factor being used to set the time period in which the rocking seat travels as recited in claim 1. The prior art of record does not disclose or teach a rocking seat control apparatus for a bi-direction solenoid with a drive circuit that computes a target value for rocking motion in the mode of a 1/f type spectrum fluctuation as recited in claims 5, 7 and 8. While claim 5 was rejected over four references in the office action of 10/31/2004, the examiner agrees with applicant's argument that such a combination has at best an "obvious to try" motivation.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Svarovsky 5,223,778 A, Saito et al. 5,245,528 A and Maruyama et al. 6,114,798 A are all control systems that measure the damping factors. The references are all PID (proportional-integral-derivative) controllers used for motor control systems in which variables such as position, velocity and acceleration are controlled. The references are respectively concerned with critical damping, overshoot and the performance of laminated structures. Ito et al. 6,153,952 A teaches using a PID controller to control the rocking motion of a shaft but does not disclose measuring damping factors. No motivation has been found for combining those references with the other prior art references that teach rocking seat control.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
